E-Journals Database

Smart e-resource access

Unlock your e-journal collection with the E-Journals database on EBSCO*host*®

Your users are already familiar with EBSCO*host*®— now give them improved access to your e-journal assets through this familiar interface. EBSCO*host* 2.0 offers significant advancements in browsing and searching capabilities, but did you know that these advancements also apply to searching e-journals?

The E-Journals database on EBSCO*host* allows article-level searching and end-user alerting of e-journals subscribed to through EBSCO. In addition, automatic mining of e-journal content with every EBSCO*host* search means users have access to the most recent literature, even if it has not been indexed in the database they are searching.

Highlights:

- access full-text e-journal content through the most-used*, premium online information resource, accessed by tens of thousands of institutions worldwide
- automatically search for e-journal results with every search
- driven by the power of EBSCO*host*
- personalize user experience through Journal Alerts, folders and more
- direct access to full text using *SmartLinks™* technology.

Benefits:

- increase your e-journal content usage through the power of EBSCO*host*
- researchers gain access to the most recent literature, even if it has not yet been indexed by other sources
- automatic set-up of holdings means zero administration
- no additional training required – your users are already familiar with the EBSCO*host* platform
- faster results with fewer headaches through automatic e-journal results included with every database search
- keeps users on top of their areas of interest with a single place to manage Journal Alerts and Search Alerts.

*According to an independent study conducted by Library Journal, "the number one reference source owned by academic (and public) libraries in electronic-only format is EBSCO*host* databases.
